

SHOWLED

components

CREATE YOUR OWN LED APPLICATION

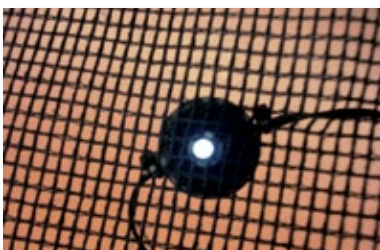

Be creative and create your own customized LED system.

Components of our Classic and Chameleon system are available separately; let this inspire you. ShowLED originated as a set of components to attach to a variety of materials including wood, metal, glass, cardboard, stonework, PVC and all smooth-surfaced fabrics. Its versatility makes it possible to install stars in costumes, floors, walls or ceilings and then later remove them for reuse in other projects.

SHOWLED NET

We often get requests for ceiling curtains in nightclubs, restaurants and venues.

Because of smoke, humidity, air-conditioning or a sprinkler system it's not ideal to work with the Molton fabric. That's why we developed **special net clips** to hold the LED sockets so we can integrate our system in a netting. This system can also be used outdoor because it doesn't catch the wind. This netting can be provided with a lining so the customer still has the option to blind the ceiling or background. Another advantage of a netting is that it's transparent so it's possible to build a set behind it. When the set is lit in the right way you'll be able to see through the netting.

WICKED, THE MUSICAL

This musical is a stunning example of how ShowLED components can be used in a set design.

Over 2000 LEDs were incorporated in the set design. The musical toured the world and it was possible to have a look at the sparkling set design in Australia, USA, Germany,..

SHOWLED

components

ADVANTAGES

- LEDs can be attached to different surfaces; wood, metal, glass, cardboard, stonework, PVC,...
- Original design, a unique LED application
- A budget friendly solution
- Reusable system

COMPONENTS

- Velcro washers
- **NEW** net clips
- Classic and Chameleon LED strings and controllers
- All cabling and plugs available

TOOLKIT

- Hammer
- Steel hole pipe
- Small hand roller
- Cutting board, white polypropylene
